

# Anggie Huang

London, UK | 07518-763007 | anggietw@gmail.com

## SUMMARY

---

Data analyst with 4+ years of experience building data products, analytical tools and dashboards that drive insights and enable decision-making across complex organisations. Skilled in the full data lifecycle — from defining data requirements and designing analytical datasets through to delivering impactful visualisations and insights used by internal teams and external stakeholders. Strong technical foundation in SQL, BigQuery, Python-adjacent statistical work (R), and data visualisation (Power BI, Looker Studio). Experienced in translating business problems into data solutions, collaborating with cross-functional teams and stakeholders, and establishing scalable data governance frameworks. Proven ability to work autonomously, manage ambiguity and deliver against tight timelines. BSc Economics (First-Class Honours), MSc Marketing (Distinction).

## WORK EXPERIENCE

---

### Clarity Global

London, UK

*Data Storyteller & Insights Analyst*

Mar 2025 – Present

- Designed an automated anomaly detection system in BigQuery using SQL, standard deviation thresholds and statistical confidence intervals to flag bot traffic and data anomalies in real time— flagged unusual patterns in real time, protecting data integrity upstream of dashboard and stakeholder reporting and eliminating manual QA checks across international markets.
- Owned design and delivery of an automated performance reporting suite for a global professional services client — defined required data breakdowns and output structure, working directly with engineer to automate data pulls, and delivered channel efficiency findings to C-suite leadership to drive investment and budget allocation decisions across markets.
- Developed a scalable content performance framework consolidating 6 data sources (GA4, SemRush, GSC, Meltwater, Paid ads) into a single benchmarked score across 1,000+ assets — establishing standardised metrics that enabled non-technical stakeholders to independently track performance and identify underperforming content without analyst dependency.
- Built a regression-based forecasting model using historical GSC data and multivariate scenario modelling with external variable controls (PPC spend, campaign activity, market shocks) to quantify organic traffic and conversion performance — delivered confidence-based projections that informed SEO investment decisions and supported internal new business pitches.
- Facilitated discovery workshops with marketing and business stakeholders at a global insurance firm to define reporting requirements, KPIs and a unified measurement framework — delivered a Looker Studio dashboard with underlying data layer architecture that enabled self-serve visibility into performance and removing dependency on ad-hoc data requests.
- Led CRO and digital experimentation analysis for an e-commerce client using GA4 and session-level behavioural data — diagnosed engagement and drop-off patterns across device type, traffic source and user cohort, prioritised hypotheses by conversion impact, and translated findings into recommendations that shaped landing page strategy and conversion uplifts.

### Howden

London, UK

*Junior Digital Marketing Analyst*

Oct 2022 – Jan 2025

- Analysed user behaviour and digital performance using GA4 and FullStory data — identified key performance drivers, acquisition patterns, and funnel drop-off points across the customer lifecycle; delivered 10+ structured insight reports to senior leadership and marketing teams with recommendations that informed prioritisation decisions and digital strategy.
- Owned end-to-end A/B and multivariate experimentation lifecycle across global websites using Optimizely — defining hypotheses, setting performance KPIs, validating statistical significance, and translating results into evidence-based recommendations that delivered measurable improvements in conversion rate and on-site engagement.
- Acted as the central analytics resource for international teams — established a group-wide reporting framework and data governance standards, then hosted 10+ training sessions for 50+ stakeholders on self-serve analytics and analytical problem-solving — embedding data-driven thinking across the organisation and reducing dependency on centralised analytics support.
- Owned GA4 property configuration and GTM implementation across 50+ global web properties — defined data taxonomies and UTM standards, validated tracking accuracy, and established QA processes to ensure data integrity across all reporting.

### Zenith Media

Taipei, Taiwan

*Integrated Marketing Communications Assistant*

Apr 2021 – Sep 2021

- Supported paid media strategy and campaign performance analysis for FMCG and entertainment brands — reviewed performance data and adjusted strategy on a weekly cycle, working with direct revenue visibility through GA tracking.

## EDUCATION

---

Alliance Manchester Business School, University of Manchester

Manchester, United Kingdom

*MSc Marketing: Distinction*

Sep 2021 – Sep 2022

College of Technology Management, National Tsing Hua University

Hsinchu, Taiwan

*BA Economics: First-class honours (1<sup>st</sup>)*

Sep 2016 – Jun 2020

## PROFESSIONAL SKILLS

---

**Skills:** SQL | BigQuery | GA4 | Looker Studio | GTM | Power BI | RStudio | Google Ads | Meta Ads | LinkedIn Ads | FullStory
